WHAT YOU SEE WHEN YOU LOG IN

# The product, at a glance.

The screenshot shows a dashboard for 'Elite Dental' in a 'DEPLOY · CLIENT WORKSPACE'. At the top, it indicates 'ALL SYSTEMS LIVE'. The dashboard is divided into several sections: 1. A header section with the company logo 'ED', name 'Elite Dental', location 'DENTAL · AUSTIN TX · DAY 12', and status 'ALL SYSTEMS LIVE'. 2. Three performance cards: 'Chatbot' (247 convos / 30d), 'Voice agent' (94 calls / 30d), and 'CRM + reviews' (34 bookings / 30d). 3. A 'MARCH CLIENT REPORT' table showing Revenue (\$12,480), New Patients (34), and Reviews (12). 4. A 'WHITE-LABEL' section stating 'Client sees your agency. Voltr is invisible.'

## OVERVIEW

## What this is.

Most AI agencies fail at delivery, not sales. They sell the vision, then spend a month building AI chatbots from scratch for each client, and the client churns before the setup is even finished. Voltr Deploy solves this at the root. You sign a client. You fill out a single onboarding form. Within 48 hours, a full AI stack is live under your brand: chatbot, voice agent, CRM, review automation, reporting, configured for that client's industry, services, and hours.

A dedicated deployment specialist handles every build. They are trained on the top 15 agency verticals, so they know the sales cycle, the common questions, the pain points, and what the AI needs to handle. Alongside them, the infrastructure runs on managed AI: Claude for conversational AI, VAPI for voice, integrated pipelines for the rest. You do not see any of it. Neither does your client.

The net result: your delivery time drops from 2 weeks to 48 hours, your margins go from 30 percent to 80 percent, and you can take 5x more clients without hiring a single engineer.

## SECTION 01

# What your deployment specialist does

Your deployment specialist is your build partner for every new client you sign. They own the technical execution end to end, escalating to you only for decisions that genuinely need your input (brand colours, niche-specific copy, client-specific business rules).

- › Configures the AI chatbot using your client's services, hours, FAQs, and branding
- › Deploys the AI voice agent on your client's phone line with proper call routing
- › Sets up CRM pipeline stages, automated appointment reminders, and follow-up sequences
- › Connects Google Business Profile for automated review request flow after every appointment
- › Builds the monthly client report template branded to your agency
- › Monitors every active deployment weekly, flagging issues before they become problems
- › Reviews chatbot and voice agent transcripts to improve response quality over time

## SECTION 02

## Niche-specific deployment templates

Pre-built templates for the top 15 agency verticals. Every template includes chatbot training data, voice agent scripts, CRM pipeline stages, and report KPIs calibrated to that industry.

- › Dental, chiropractic, med spa (healthcare adjacent)
- › Real estate (buyer and seller variants)
- › HVAC, plumbing, roofing, solar (home services)
- › Legal (personal injury and family law)
- › Fitness and gym (membership-led)
- › Restaurant (reservation and catering variants)
- › Auto repair, insurance, financial advisory
- › Custom niche on request, 7-day build time

## SECTION 03

# White-label everything

Your clients never see Voltr. The chatbot, voice agent, reports, and dashboards are all branded to your agency. To the client, you built this.

- › Chatbot widget shows your agency's logo and colours on the client's site
- › Voice agent introduces itself as calling on behalf of the client's business
- › Monthly client reports use your agency's brand and signature
- › Client dashboard (if enabled) is fully your branding
- › You can generate demo environments for prospects under your brand

## SECTION 04

# Client result tracking

Every deployment tracks the metrics your client cares about. Your agency looks like a performance partner, not a software vendor.

- › Conversations handled by the chatbot and voice agent per month
- › Appointments booked through the AI systems
- › Google reviews collected and average rating trend
- › Estimated revenue attributed to the AI systems (ROI calculator)
- › Automated quarterly business review deck for you to present to your client

## HOW YOU KNOW IT IS WORKING

# How you know it is working

Your agency sees deploy times, uptime, conversation volume, appointments booked across every client. Your client sees a branded-to-you dashboard with the same metrics plus revenue attribution. Monthly client report auto-generated and sent under your signature. If anything slips, the alert reaches you before they notice.

- › Agency dashboard: all active deployments, status, volume, outcomes
- › Client-facing white-label dashboard showing the results you deliver
- › Monthly client report auto-generated, your brand, your signature
- › Proactive alerts if a chatbot or voice agent goes offline, ever
- › Quarterly business review deck auto-built for you to present to the client

## SECTION 06

# Pricing breakdown

Full transparency on what you pay and when.

- › \$997 one-time setup fee, charged on day one alongside your first month
- › \$1,497 per month founder rate, locked for the life of your account
- › Up to 3 active client deployments included at this tier
- › Additional deployments beyond 3 are priced per-client (spec and pricing shared at onboarding)
- › Expected first-month total: \$997 setup plus \$1,497 equals \$2,494
- › From month 4 onwards: \$1,497 per month, month-to-month after the 3-month minimum

## SECTION 07

# Contract terms

This is a managed delivery service with a 3-month minimum contract signed at purchase. The minimum exists because we are dedicating team capacity to your account, and because your clients need continuity of service.

- › 3-month minimum. \$4,491 total over the minimum term before any additional deployments.
- › Month-to-month cancellation after month 3
- › We build and operate. You own the client relationship and the revenue.
- › If you cancel, we hand over deployment credentials so your clients can keep operating. We do not take hostages.
- › Refund covers the service not being delivered as described, not the agency owner's client churn or business outcomes

## SECTION 08

# Who this is for

Agency operators whose sales ability outpaces their delivery capability.

- › You are already signing clients (or can close quickly) but delivery is your bottleneck
- › You want to scale past 5 to 10 clients without hiring engineers
- › You are sick of building AI chatbots from scratch for every new client
- › You want to be a recognised brand in your niche, not a technical contractor

## SECTION 09

# Who this is not for

Do not sign up if these do not apply.

- › You have not closed a single client yet. Start with Copilot or Client Machine first.
- › You want to learn how AI agency infrastructure works yourself. We are not a tutorial service.
- › You are not prepared to commit to the 3-month minimum.
- › You want daily hand-holding on the sales side. Deploy handles delivery, not your sales process.

## ANSWERS

## Frequently asked.

**How long does a new client deployment actually take?**

48 hours from the moment you submit the onboarding form with your client's details. That includes chatbot, voice agent, CRM, and reporting, all branded to your agency and configured for that client's niche and services.

**What happens if my deployment specialist is out sick?**

Every account has a primary and backup specialist. You always have continuity. No deployment gets stuck waiting for one person to come back.

**Can I see a demo before I sign up?**

Yes. Once you are in founder access, you get a generic demo environment you can show prospects under your brand. For now, the chat you are in right now is a demo of the conversational AI layer we deploy for every client.

**What if my client wants to customise beyond the template?**

Included. The specialist adjusts within reason (brand, voice, hours, services, FAQs). Heavy custom work outside the standard scope is quoted separately at onboarding.

**Do I have to change my pricing to use this?**

No. You charge your clients whatever you are charging. Most Deploy users are at \$1,500 to \$3,000 per month per client, which means 80 percent or better margin on top of our \$1,497 per month. Three clients pays for Deploy and then some.

**What if Voltr shuts down?**

You get every piece of infrastructure handed over. Access credentials, documentation, exports. Your clients keep operating. We do not hold anyone hostage. We are not interested in that model.

# Lock in founder pricing. Ship in the coming weeks.

Your rate stays locked for the life of your account. Only 20 founder spots available at this tier.
